The Rheology Problem

Nelder-Mead Algorithm

Given $f : \mathbb{R}^n \mapsto \mathbb{R}$ and the vertices of an initial simplex $\mathrm{Y}^0 = \{\mathrm{y}^0, \mathrm{y}^1, \ldots, \mathrm{y}^n\}$

0. Initialize:
   - $\delta^e, \delta^{oc}, \delta^{ic}, \gamma$ parameters
   - $k \leftarrow 0$ iteration counter
1. Order and create centroid:
   - reorder Y^k so $f(y^0) \leq f(y^1) \leq \ldots \leq f(y^n)$
   - set $x^c = \frac{1}{n} \sum_{i=0}^{n-1} y^i$, the centroid of all except the worst point
2. Reflect:
   - test reflection point $x^r = x^c + (x^c - y^n)$
     - if $f(y^0) \leq f(x^r) < f(y^{n-1})$, then accept x^r and goto 1
3. Expand:
   - if $f(x^r) < f(y^0)$, then test expansion point $x^e = x^c + \delta^e(x^c - y^n)$

4a). Outside Contraction:
   - if $f(y^{n-1}) \leq f(x^r) < f(y^n)$, then test outside contraction $x^{oc} = x^c + \delta^{oc}(x^c - y^n)$

4b). Inside Contraction:
   - if $f(x^r) \geq f(y^n)$, then test inside contraction point $x^{ic} = x^c + \delta^{ic}(x^c - y^n)$

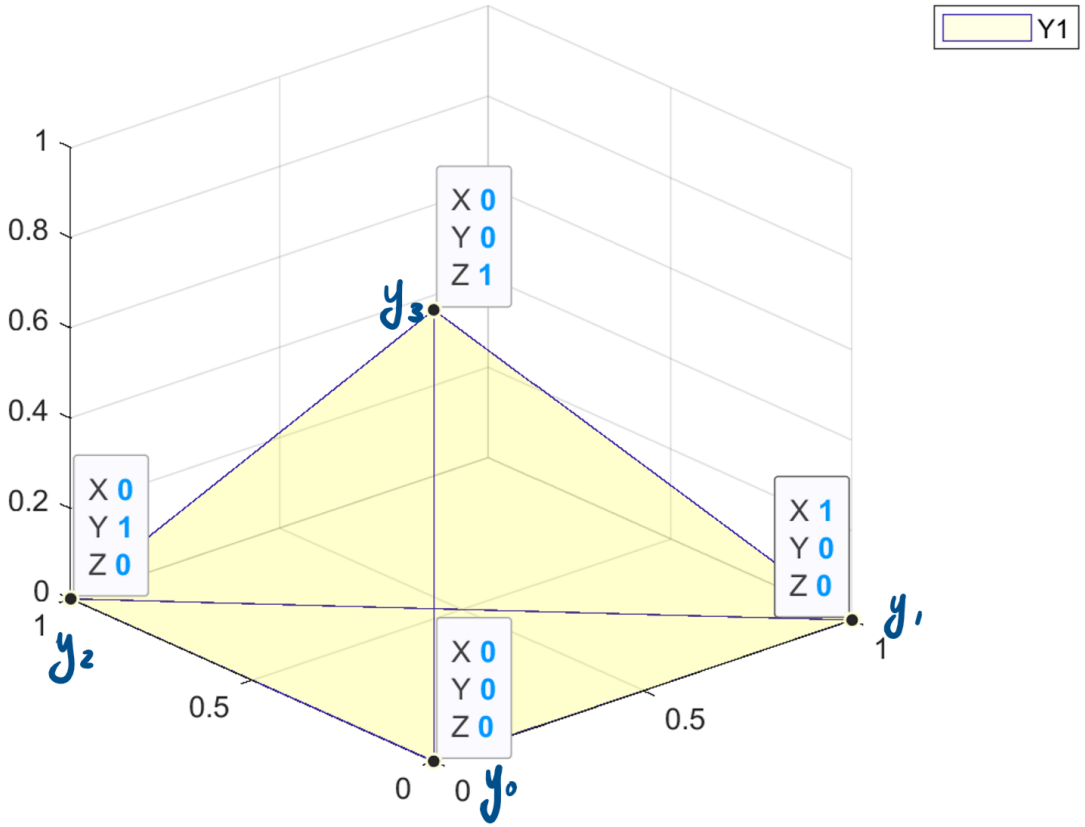
5. Shrink:
   - if all tests fail, then shrink
     $\mathrm{Y}^{k+1} = \{\mathrm{y}^0, \mathrm{y}^0 + \gamma(\mathrm{y}^1 - \mathrm{y}^0), \mathrm{y}^0 + \gamma(\mathrm{y}^2 - \mathrm{y}^0), \ldots, \mathrm{y}^0 + \gamma(\mathrm{y}^n - \mathrm{y}^0)\}$

Algorithm from lecture slides

0. Initialize

```
% Question 1a)
Y0a = [0 1 0 0;
       0 0 1 0;
       0 0 0 1];

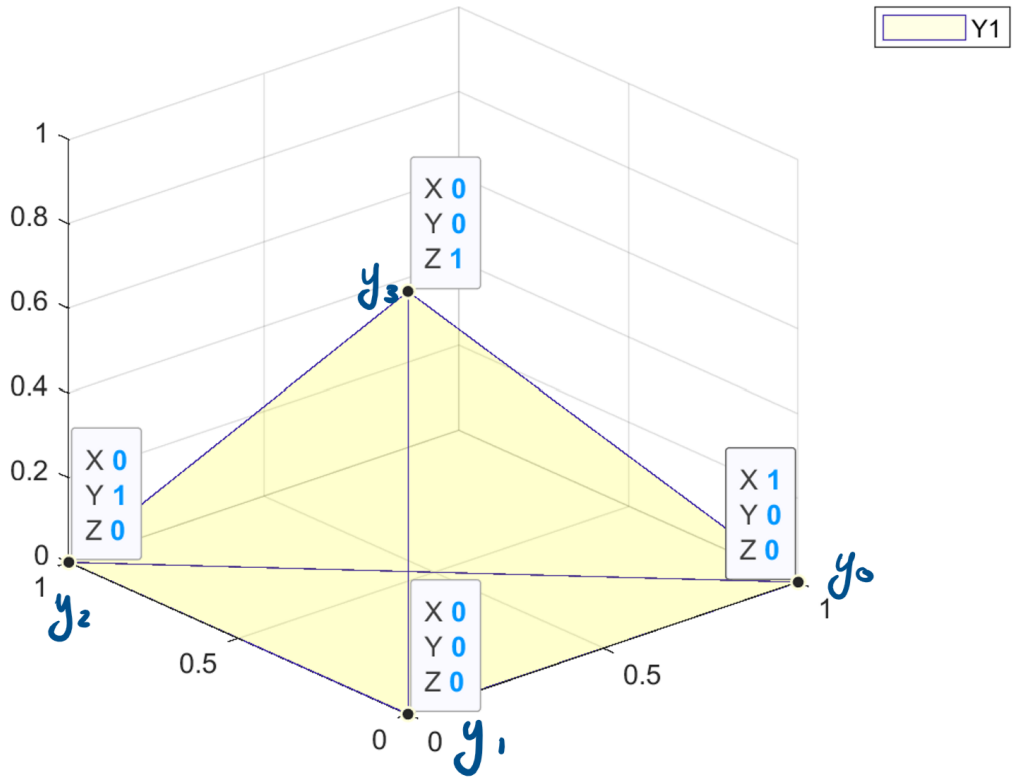
del_e_s = 2;
del_oc_s = 1/2;
del_ic_s = -1/2;
gamma_s = 0.1;
```



1. Order

```
case 'nonshrink'
    k = length(Yi(1,:));
    for i = k:-1:2
        if fYi(i)< fYi(i-1)
            temp = Yi(:,i-1);
            Yi(:,i-1) = Yi(:,i);
            Yi(:,i) = temp;

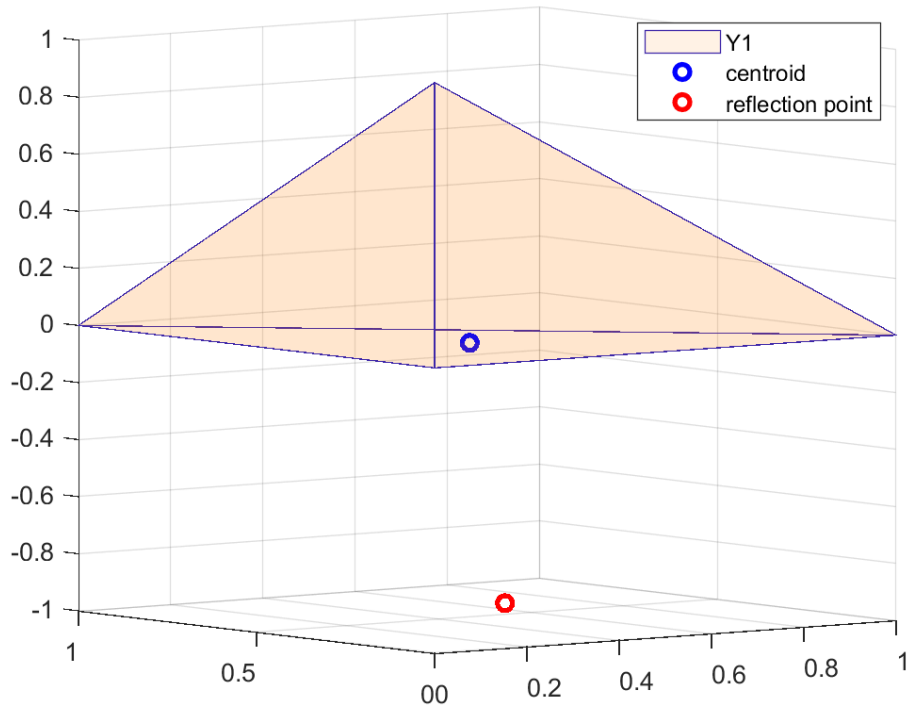
            tempf = fYi(i-1);
            fYi(i-1) = fYi(i);
            fYi(i) = tempf;
        else
            break;
        end
    end
case 'shrink'
    for i = 2:k
        key = Yi(:,i);
        fkey = fYi(i);
        j = i-1;
        while ((j>= 1) && (fkey < fYi(j)))
            Yi(:,j+1) = Yi(:,j);
            fYi(j+1) = fYi(j);
            j = j -1;
        end
        Yi(:,j+1) = key;
        fYi(j+1) = fkey;
    end
```



1 and 2. Calculate centroid and x^r

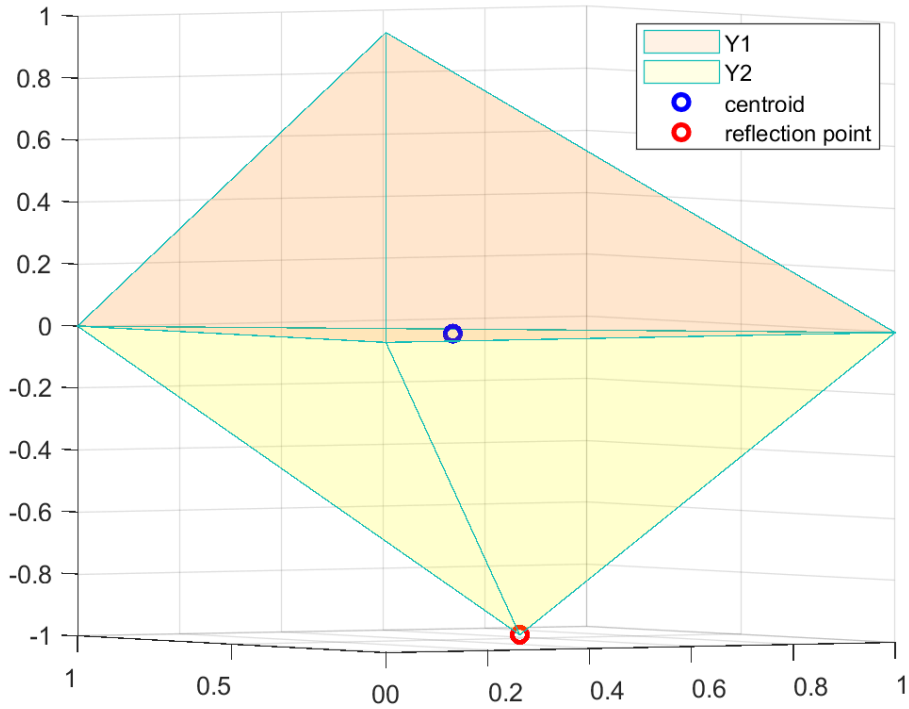
```
%CALCULATE CENTROID%
xc = zeros(k - 1,1);
for i = 1:k-1
    xc = xc + Yk(:,i);
end
xc = (1/(k-1)).*xc;

%CALCULATE REFLECTION POINT%
xr = xc + (xc - Yk(:,k));
fr = f(xr);
feval = feval + 1;
```



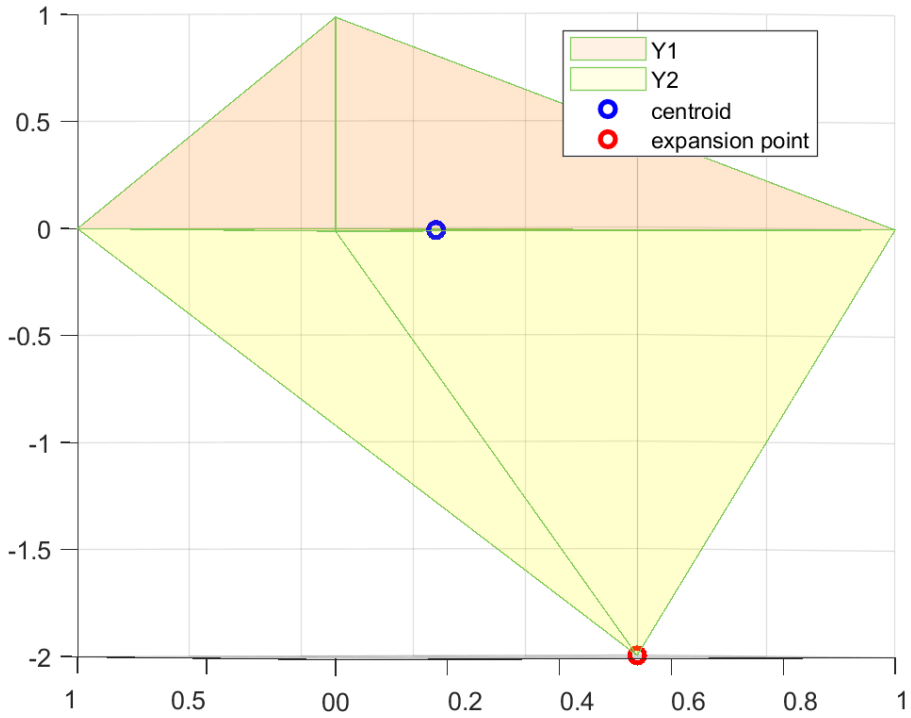
2. Reflect

```
%REFLECTION STEP%
if (f_store(1) <= fr)&&(fr < f_store(k-1))
    %disp("ref")
    Yk(:,k) = xr;
    f_store(k) = fr;
    stepComputed = "nonshrink";
```



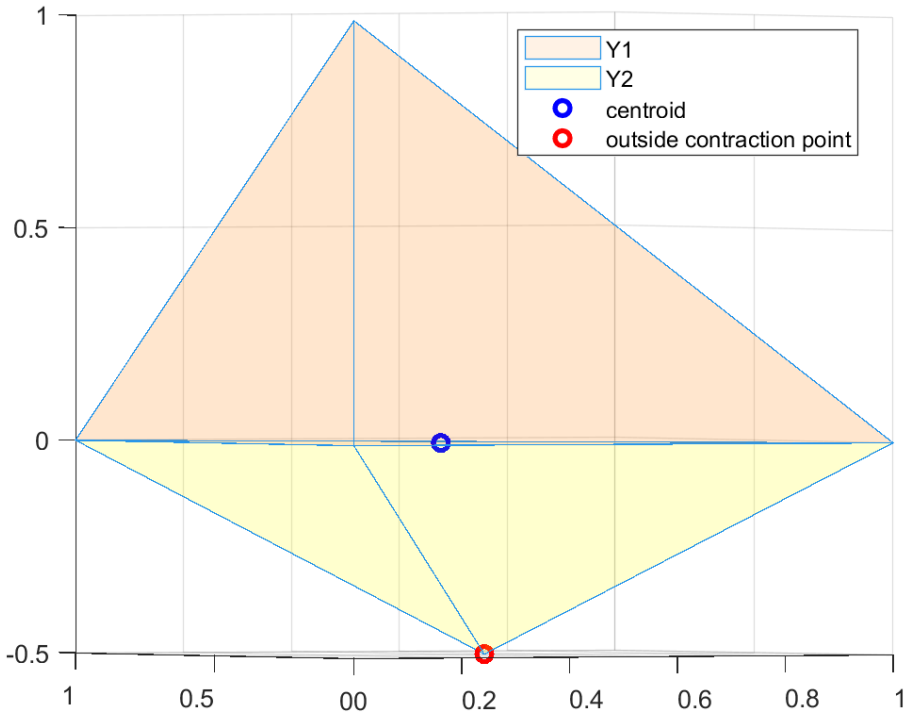
3. Expand

```
%EXPANSION%
elseif (fr < f_store(1))
    %disp("exp")
    xe = xc + del_e*(xc - Yk(:,k));
    fe = f(xe);
    feval = feval + 1;
    if fe < fr
        Yk(:,k) = xe;
        f_store(k) = fe;
    else
        Yk(:,k) = xr;
        f_store(k) = fr;
    end
    stepComputed = "nonshrink";
```



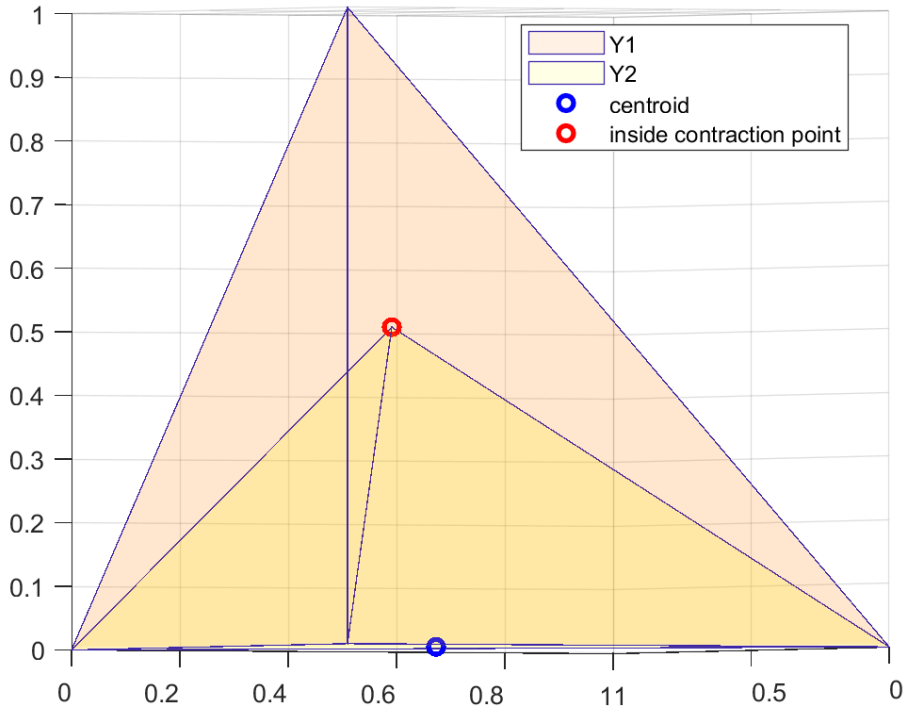
4.a) Outside Contraction

```
%OUTSIDE CONTRACTION%
elseif (f_store(k-1) <= fr)&&(fr < f_store(k))
    xoc = xc + del_oc*(xc - Yk(:,k));
    foc = f(xoc);
    feval = feval + 1;
    stepComputed = "nonshrink";
    if foc < fr
       % disp("oc")
        Yk(:,k) = xoc;
        f_store(k) = foc;
        stepComputed = "nonshrink";
    else
        %disp("ocref")
        Yk(:,k) = xr;
        f_store(k) = fr;
        stepComputed = "nonshrink" ;
    end
```



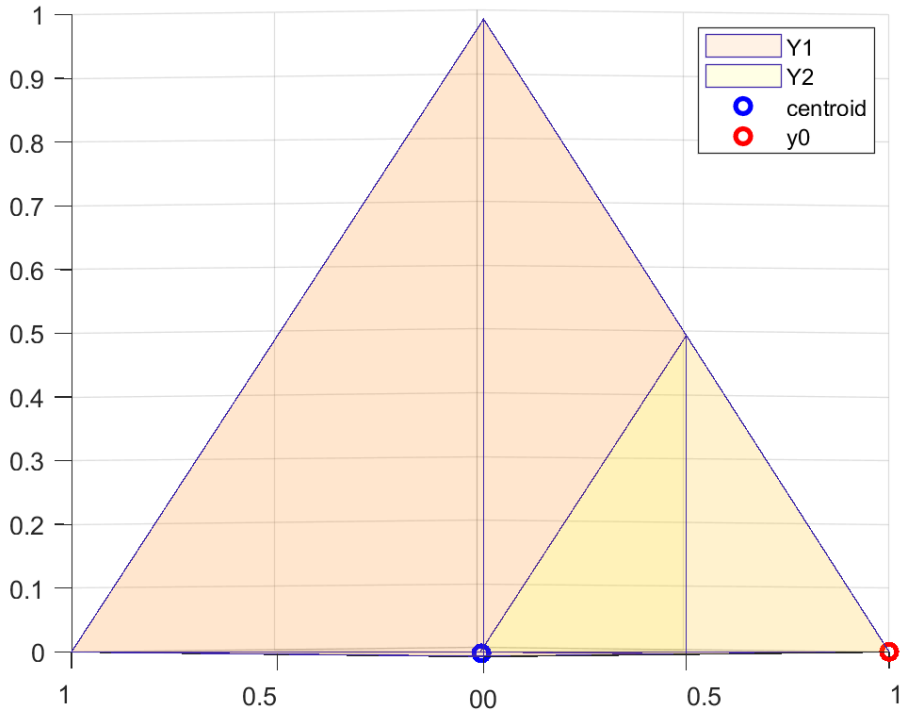
4.b) Inside Contraction

```
%INSIDE CONTRACTION%
elseif (fr >= f_store(k))
    xic = xc + del_ic.*(xc - Yk(:,k));
    fic = f(xic);
    feval = feval + 1;
    if fic < f_store(k)
       % disp("ic")
        Yk(:,k) = xic;
        f_store(k) = fic;
        stepComputed = "nonshrink";
```



5. Shrink

```
%SHRINK%
else
   % disp("shrink")
    for i = 2:k
        Yk(:,i) = (1-gamma).*Yk(:,1) + gamma.*Yk(:,i);
        f_store(i) = f(Yk(:,i));
        feval = feval + 1;
    end
    stepComputed = "shrink";
    [Yk,f_store] = sortSimplex(Yk,f_store,stepComputed);
end
   case 'shrink'
       for i = 2:k
           key = Yi(:,i);
           fkey = fYi(i);
           j = i-1;
           while ((j>= 1) && (fkey < fYi(j)))
               Yi(:,j+1) = Yi(:,j);
               fYi(j+1) = fYi(j);
               j = j -1;
           end
           Yi(:,j+1) = key;
           fYi(j+1) = fkey;
       end
```



Examples of Nelder-Mead at work

The Rheology Problem: Revisited

1. Standard parameters

Here is the code we gave to NM to run the standard parameters
Here is the function values we obtained by running NM on the standard parameters

2. New parameters

We proposed new parameters using grid search on the parameter space
Here is the code we gave to NM to run the new parameters
Here is the function values we obtained by running NM on our new parameters

The Rheology Problem: Revisited

Here is our convergence plot code

Here is our convergence plot of all the cases
