# The Rheology Problem

## Viscosity of a system

$$\eta(\dot{\gamma}) = \eta_0(1 + \lambda^2 \dot{\gamma}^2)^{\frac{\beta-1}{2}}$$

A function of the strain rate,  $\dot{\gamma}$ , with parameters  $\eta_0$ ,  $\lambda$ , and  $\beta$ .

TABLE 1.1. Observed data in rheology of polymeric systems

Observation $i$	Strain rate $\dot{\gamma}_i$ ( $s^{-1}$ )	Viscosity $\eta_i$ ( $Pa \cdot s$ )
1	0.0137	3220
2	0.0274	2190
3	0.0434	1640
4	0.0866	1050
5	0.137	766
6	0.274	490
7	0.434	348
8	0.866	223
9	1.37	163
10	2.74	104
11	4.34	76.7
12	5.46	68.1
13	6.88	58.2

Absolute Error:

$$\epsilon_i(\eta_0, \lambda, \beta) = |\eta_0(1 + \lambda^2 \dot{\gamma}_i^2)^{\frac{\beta-1}{2}} - \eta_i|$$

Non-smooth optimization problem:

$$\hat{g}(\eta_0, \lambda, \beta) = \sum_{i=1}^{13} \epsilon_i(\eta_0, \lambda, \beta)$$

(Audet and Hare, 2017)

# Nelder-Mead Algorithm

Given  $f : \mathbb{R}^n \mapsto \mathbb{R}$  and the vertices of an initial simplex  $Y^0 = \{y^0, y^1, \dots, y^n\}$

0. Initialize:

$\delta^e, \delta^{oc}, \delta^{ic}, \gamma$       parameters  
 $k \leftarrow 0$       iteration counter

1. Order and create centroid:

reorder  $Y^k$  so  $f(y^0) \leq f(y^1) \leq \dots \leq f(y^n)$   
set  $x^c = \frac{1}{n} \sum_{i=0}^{n-1} y^i$ , the centroid of all except the worst point

2. Reflect:

test reflection point  $x^r = x^c + (x^c - y^n)$   
if  $f(y^0) \leq f(x^r) < f(y^{n-1})$ , then accept  $x^r$  and goto 1

3. Expand:

if  $f(x^r) < f(y^0)$ , then test expansion point  $x^e = x^c + \delta^e(x^c - y^n)$

4a). Outside Contraction:

if  $f(y^{n-1}) \leq f(x^r) < f(y^n)$ , then test outside contraction  $x^{oc} = x^c + \delta^{oc}(x^c - y^n)$

4b). Inside Contraction:

if  $f(x^r) \geq f(y^n)$ , then test inside contraction point  $x^{ic} = x^c + \delta^{ic}(x^c - y^n)$

5. Shrink:

if all tests fail, then shrink  
 $Y^{k+1} = \{y^0, y^0 + \gamma(y^1 - y^0), y^0 + \gamma(y^2 - y^0), \dots, y^0 + \gamma(y^n - y^0)\}$

(Math 462, UBCO, 2020)

# 0. Initialize

```

# The Rheology Problem: Solved

## 1.a) Standard parameters with simplex A

Input:

```
Y0a = [0 1 0 0;  
        0 0 1 0;  
        0 0 0 1];
```

```
del_e_s = 2;  
del_oc_s = 1/2;  
del_ic_s = -1/2;  
gamma_s = 1/2;
```

Output:

9.5062	9.5062	9.5062	9.5062
-8.4167	-8.4167	-8.4167	-8.4167
8.7269	8.7269	8.7269	8.7269

$$f_{best}^k = 32.7239$$

# The Rheology Problem: Solved

## 1.b) Standard parameters with simplex B

### Input:

```
Y0b = Y0a + (9.5)*ones(3,4);
```

```
del_e_s = 2;
```

```
del_oc_s = 1/2;
```

```
del_ic_s = -1/2;
```

```
gamma_s = 1/2;
```

### Output:

9.5062	9.5062	9.5062	9.5062
8.4167	8.4167	8.4167	8.4167
8.7269	8.7269	8.7269	8.7269

$$f_{best}^k = 32.7238$$

# The Rheology Problem: Solved

## 2.a) New parameters with simplex A

### Input:

```
Y0a = [0 1 0 0;  
        0 0 1 0;  
        0 0 0 1];
```

```
del_e_na = 4.71;  
del_oc_na = 0.65;  
del_ic_na = -0.3;  
gamma_na = 0.94;
```

### Output:

9.5062	9.5062	9.5062	9.5062
-8.4167	-8.4167	-8.4167	-8.4167
8.7269	8.7269	8.7269	8.7269

$$f_{best}^k = 32.7238$$

# The Rheology Problem: Solved

## 2.b) New parameters with simplex B

### Input:

```
Y0b = Y0a + (9.5)*ones(3,4);
```

```
del_e_nb = 2.3;  
del_oc_nb = 0.46;  
del_ic_nb = -0.45;
